BIOLOGICAL ACTIVITY OR INHIBITORS

Trans-caryophyllene (TC), a component of essential oil found in many flowering plants, has shown its neuroprotective effects in various neurological disorders, TC has effect on kainic acid-induced seizure activity caused by oxidative stress and pro-inflammation, and significantly inhibits KA-induced generation of malondialdehyde, TC exerts cerebral anti-inflammatory effects by mitigating the expression of proinflammatory cytokines, such as TNF- α and IL-1 β ; suggests that TC has a potential protective effect on chemical induced seizure and brain damage. [1]

Trans-caryophyllene and α -humulene from *Salvia officinalis* have cytotoxic activity in animal and human tumor cells.[2]

Trans-caryophyllene has anti-spasmodic activity on rat tracheal smooth muscle which could be explained, at least in part, by the voltage-dependent Ca²⁺ channels blockade.[3]

Trans-caryophyllene can reduce both acute and chronic pain in mice, which may be mediated through the opioid and endocannabinoid systems.[4]

Trans-caryophyllene possesses anti-inflammatory and analgesic properties, has the prevention of leukopenia in an experimental chemotherapy model in Wistar rats, exerts anti-inflammatory effects in TNF- α -stimulated chondrocyte models.[5,6]
